

PART 9 part 2

Board of Educators

The board of Education was made up of individuals that have suffered the brainwashing of the educator training departments of our universities and colleges. They are firmly entrenched with the personality style of emotion and the first level of cognitive ability, Knowledge.

When going to the first parent teachers meeting I expressed the difficulty in further educating the students for future employment in our economy. Further, I stated that the students needed to master the ability to think, so they can solve problems.

They need to be able to think like a Chameleon. They need to be able to switch into any needed personality style smoothly. Further the students have not been trained in the proper use of cognitive abilities either. They need the top three levels of cognitive thought, Analysis, Synthesis, and Evaluation.

Each field of study has a preferred personality style and cognitive abilities that is necessary to successfully master its topics.

Most of the higher-level classes require the student to be able to analyze a problem and provide a solution to that problem. Unfortunately our high schools have not been able to provide students with these abilities. To make it even worse the colleges and universities have not been able to provide this necessary ability either.

The problem is the students are locked in to emotion and the lowest level of cognitive thought, knowledge. Further even the knowledge they have is corrupt at every level of understanding so even if they could think they are using the incorrect data to make decisions.

The topic of using a mask for our popular flue was answered by asking them to find vetted research. Until then don't use mask on children, most of them probably would easily overcome any exposure to the flue.

They responded to me by excluding me from Parent-Teachers meetings and limited me to 5 minutes and then to 3 minutes per month at the Board of Education meetings. Most of these meetings had no paper documentation.

During the meeting with the Superintendent, we talked about many topics and he informed me that they have good books and emotionalism is good.
